

Flood Watch

Dryden-Fort Frances-Atikokan District

Monday, April 27, 2026
10:00hrs

The Ministry of Natural Resources – Dryden-Fort Frances-Atikokan District is advising area residents that a Flood Watch is in effect in the District until Wednesday, April 29, 2026

Residents in the Dryden-Fort Frances-Atikokan District should keep a close watch on upcoming weather forecasts and local water conditions. Residents should also exercise caution around less traveled roads, lakes, rivers and areas of high potential run-off. There is a risk of high flows in low-lying areas as well as unstable ice and cold, fast flowing water. In some areas of the district where evening temperatures may drop below freezing, slippery surfaces and freezing rain or snow might also be a risk.

The ministry is closely monitoring the weather and developing watershed conditions. Further updates will be issued as appropriate.

TECHNICAL INFORMATION

Description of Weather System

Rain associated with an approaching weather system is expected to begin Monday morning over northwestern Ontario and advance towards Lake Superior later in the day. Rainfall amounts of 15 to 25 mm are expected with locally higher amounts possible. Rain should taper off from west to east Monday night.

Description of Current Conditions

There is still snow present in certain areas of the district and the ground is not completely thawed. Rivers and streams are flowing fast due to spring melt over the past couple of weeks. Increasing flows and ice jams are possible. Flooding in low-lying areas can be expected and those areas currently experiencing high water levels or flooding can expect these conditions to continue.

DEFINITIONS

- **WATERSHED CONDITIONS STATEMENT – WATER SAFETY:** indicates that high flows, melting ice or other factors could be dangerous for such users as boaters, anglers and swimmers but flooding is not expected.
- **WATERSHED CONDITIONS STATEMENT – FLOOD OUTLOOK:** gives early notice of the potential for flooding based on weather forecasts calling for heavy rain, snow melt, high winds or other conditions
- **SHORELINE CONDITIONS STATEMENT – WATER SAFETY:** indicates that **along the Great Lakes shorelines high water**, melting ice or other factors could be dangerous but flooding is not expected.
- **SHORELINE CONDITIONS STATEMENT – FLOOD OUTLOOK:** gives early notice of the potential for flooding **along the Great Lakes shorelines** based on weather and lake conditions, and water safety information.
- **FLOOD WATCH:** potential for flooding exists within specific watercourses and municipalities
- **FLOOD WARNING:** flooding is imminent or occurring within specific watercourses and municipalities.
