Centre of Expertise in Ignace - Preparatory Site Work Begins

The Centre of Expertise preparatory and geotechnical site work is now beginning to take place in Ignace, Ontario and will continue at site for the next three weeks. CIMA+ is the primary constructor with responsibility for the site preparation work.

The NWMO has now commenced preliminary work on their property located adjacent to the Ignace Township office. Over the coming days, residents may notice tree harvesting, removal of brush and trees and clearing activities to allow for borehole drilling which will be taking place on the NWMO site.

This work is being undertaken to prepare the property for upcoming geotechnical investigation work, which will inform the design and eventual construction of the Centre of Expertise (COE) in Ignace.

This represents the first visible step on the ground as NWMO begins advancing the next phase of work in the community and we are extremely excited as this work continues to evolve over the coming months.

Should there be any questions, please feel free to contact outreach@ignace.ca.

Thank you
